

SALESFORCE CONFIGURATION MODEL 2.2.4

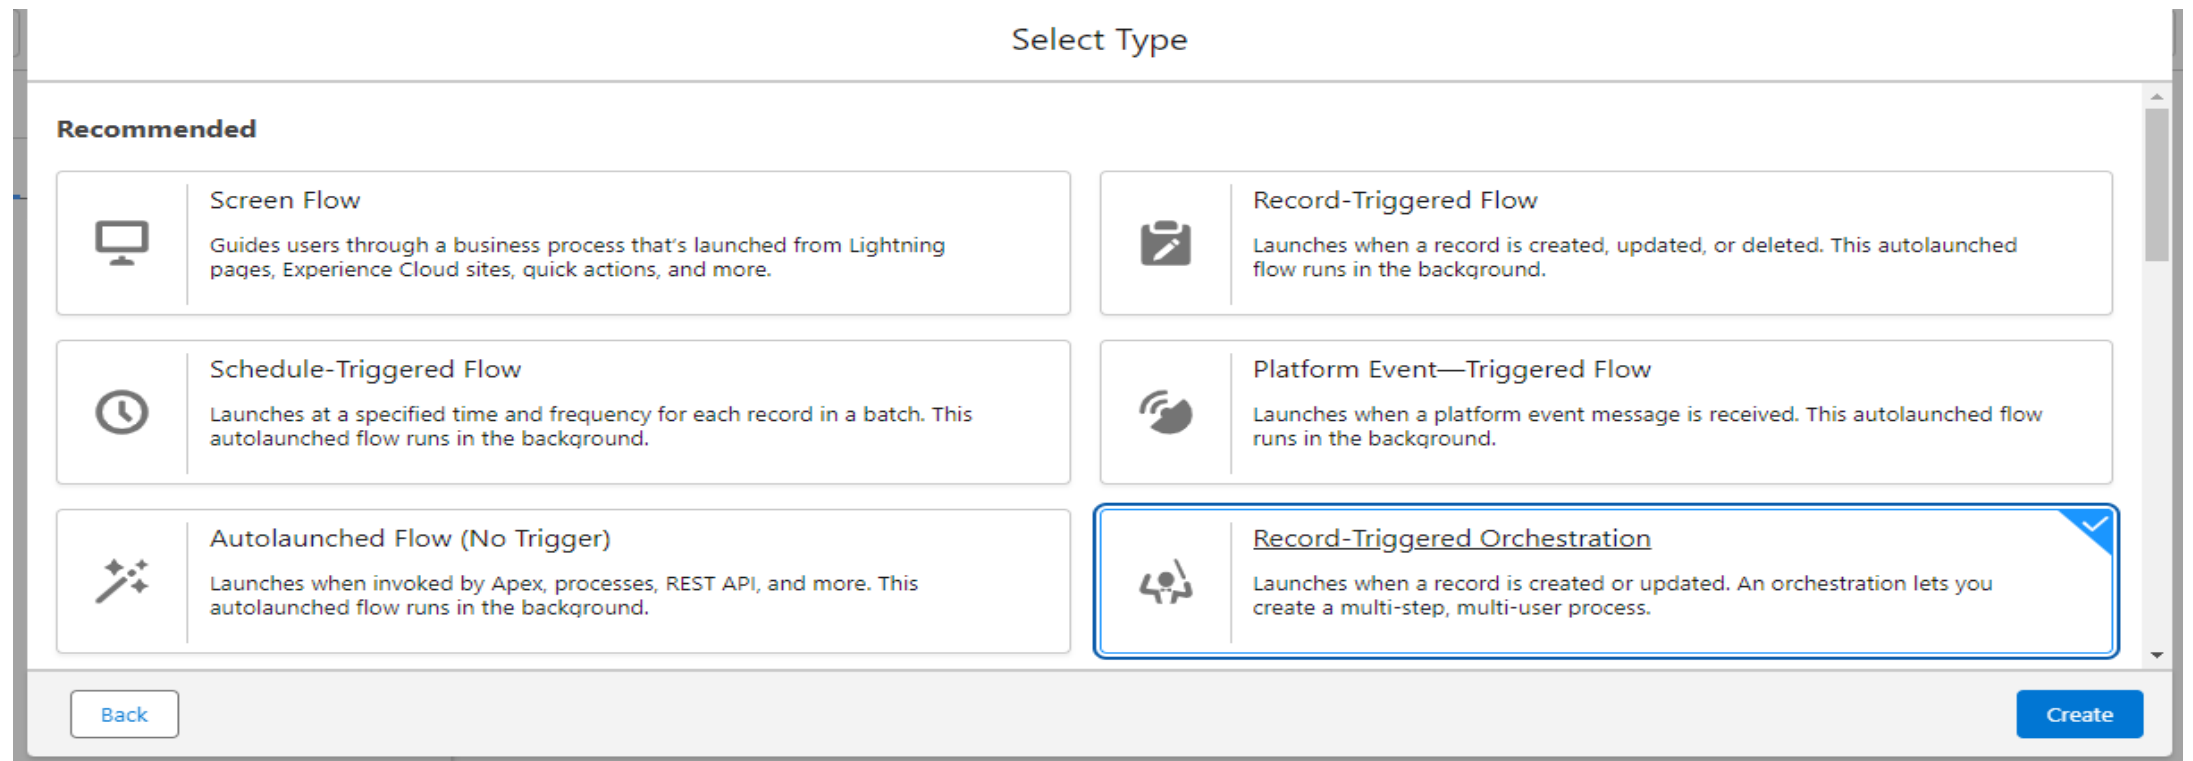

AGENDA

Flow Orchestration

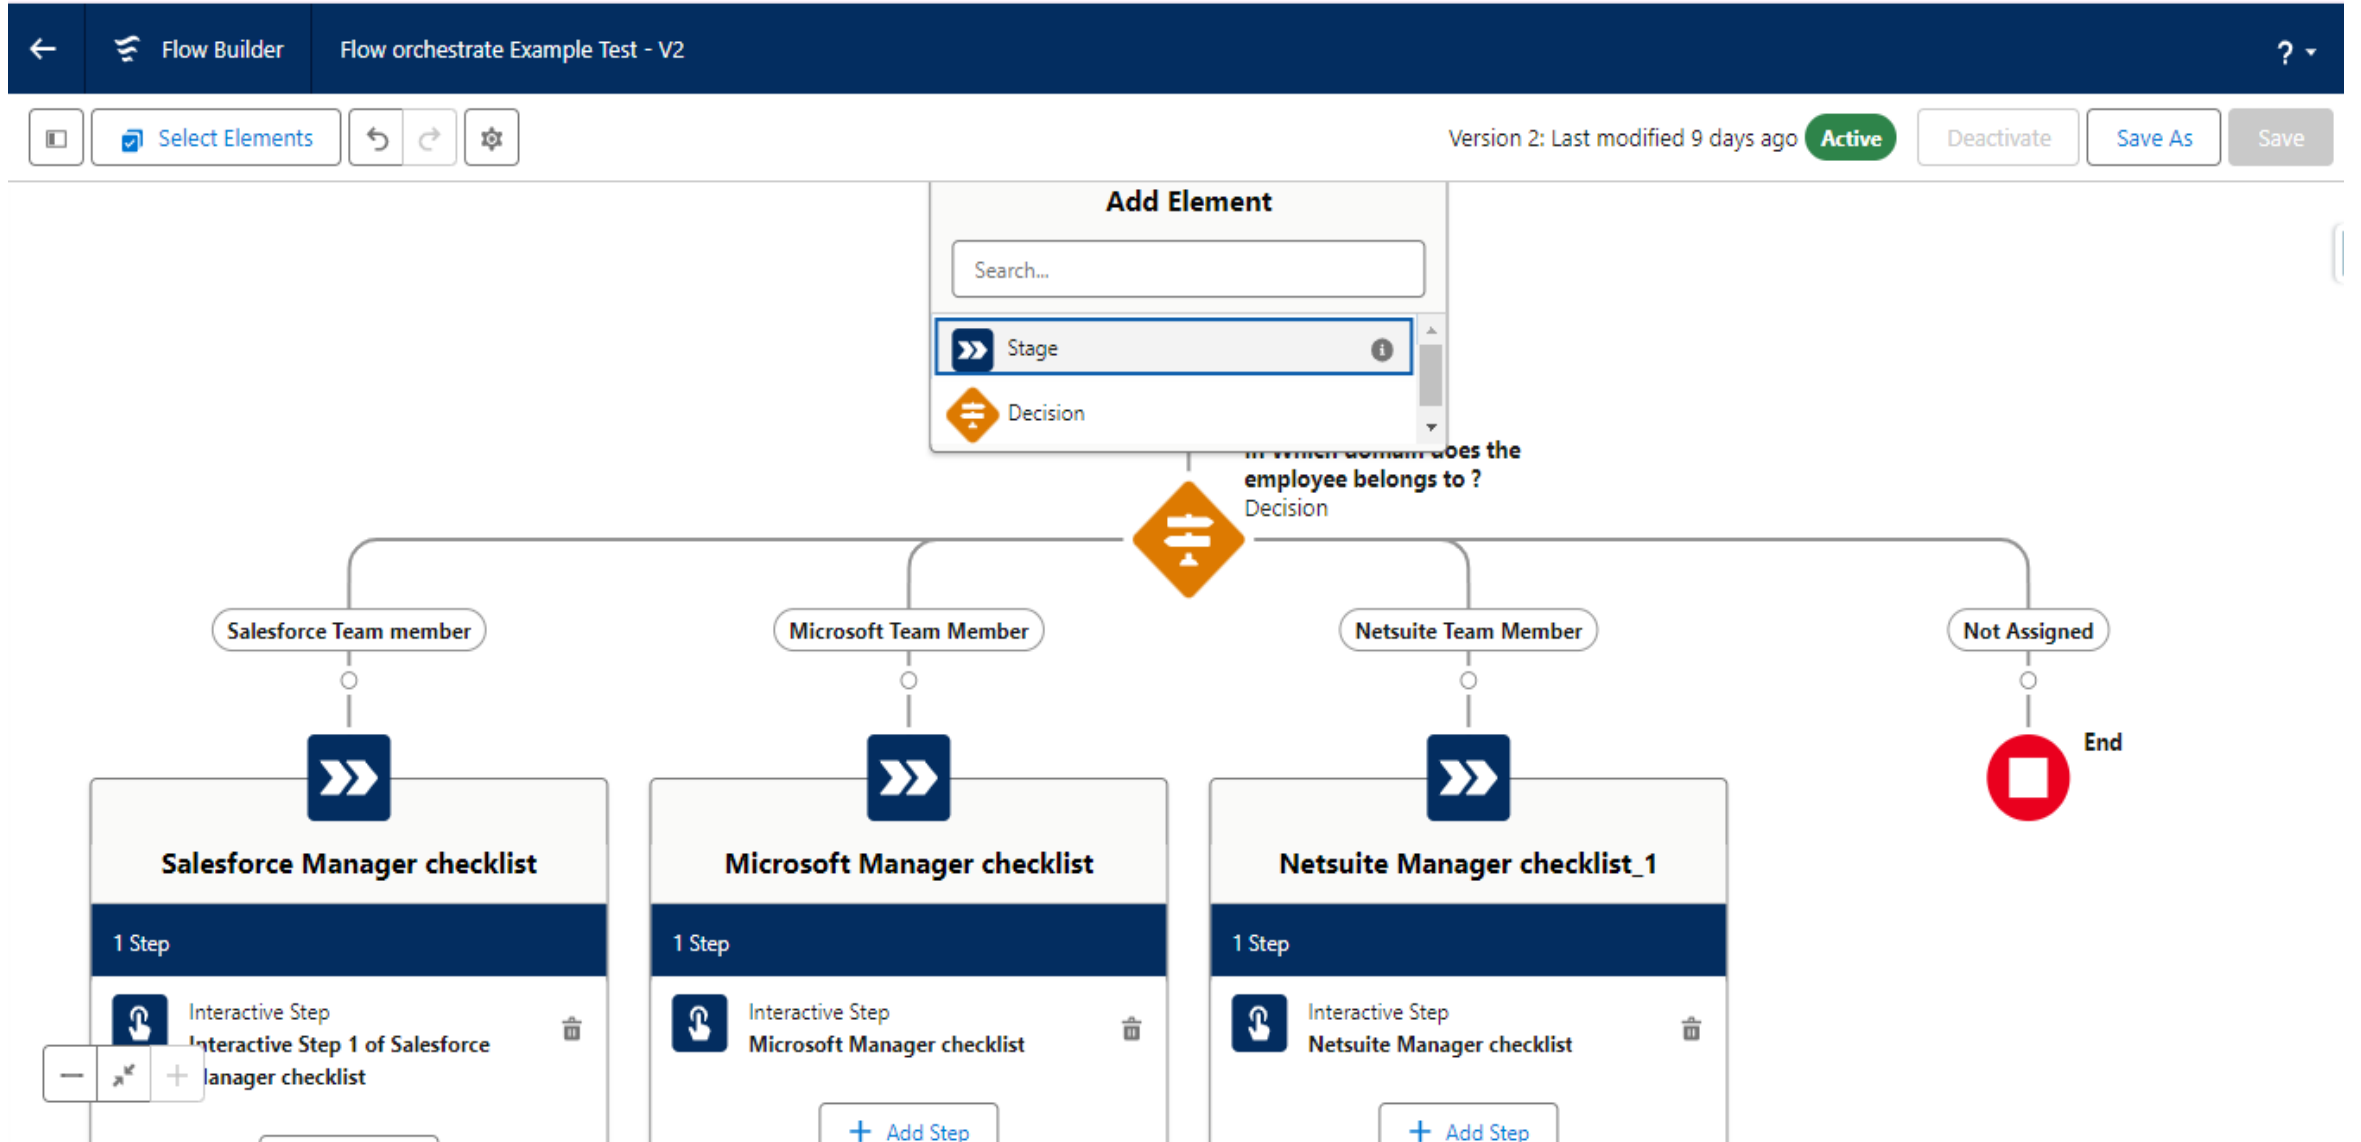

Platform event Flow

FLOW ORCHESTRATION

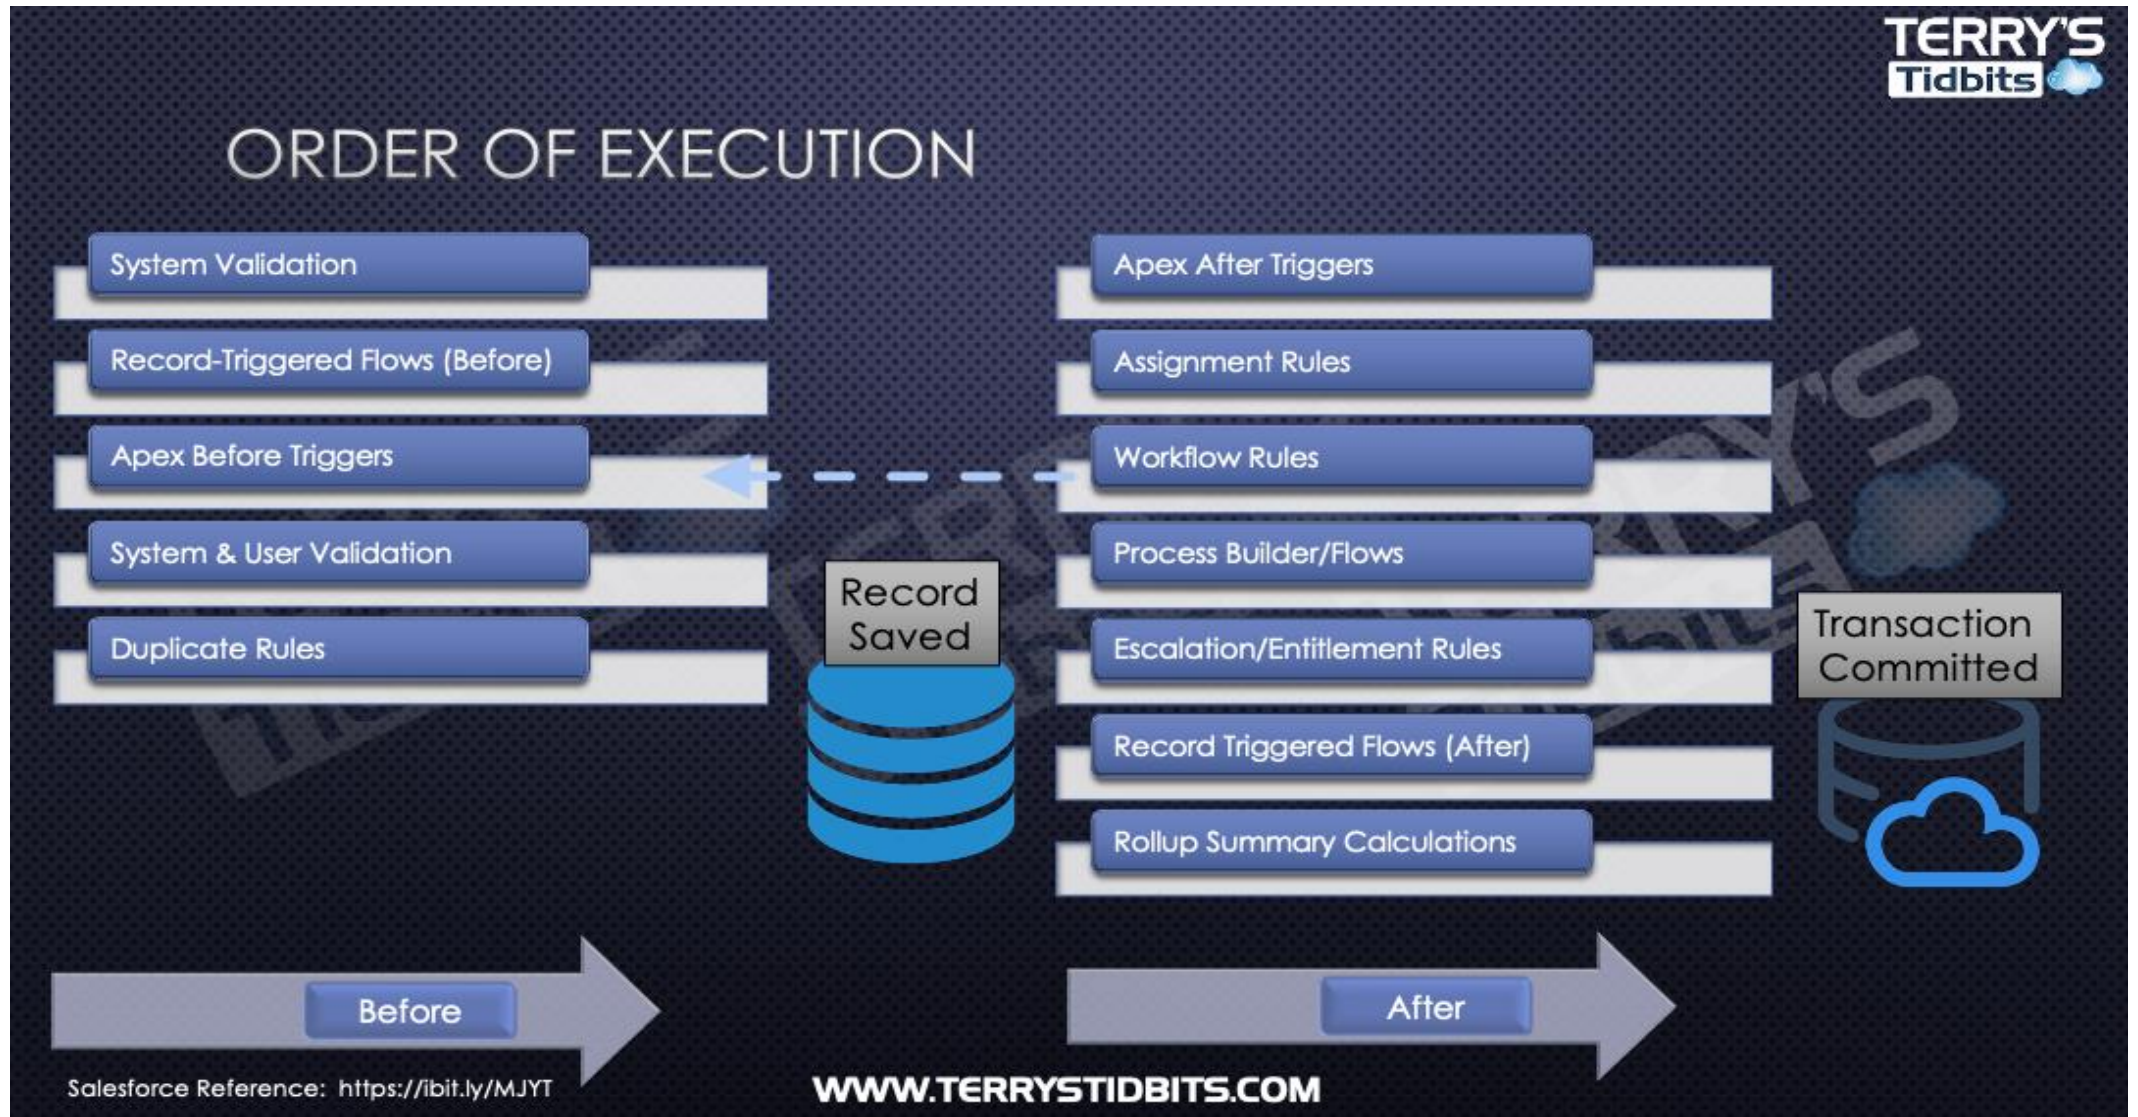

- Salesforce Flow Orchestrator is a new Flow functionality that allows admins to string a number of flows and business processes together across multiple people.
- It is a tool that allows you to orchestrate multi-user, multi-step, and multi-stage Flows.

FLOW ORCHESTRATION

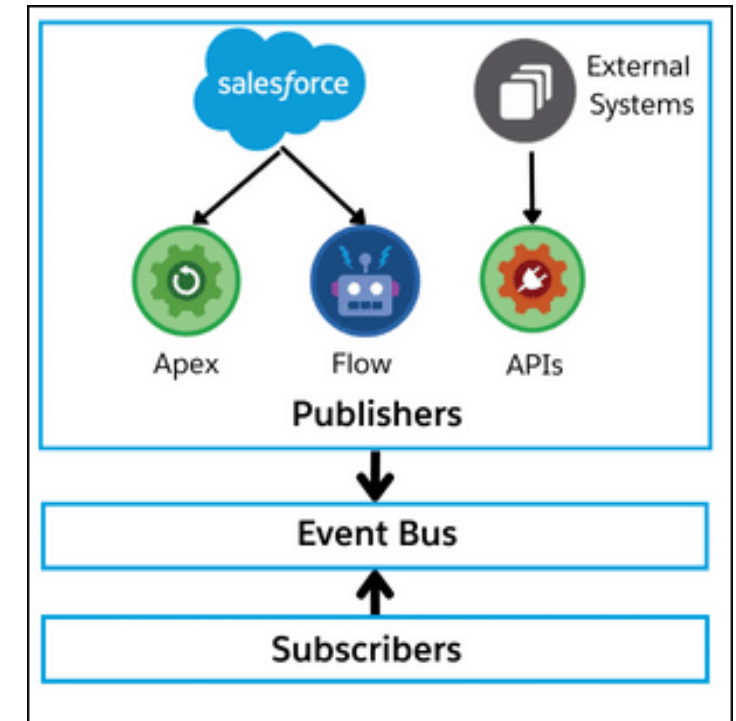

ORDER OF EXECUTION

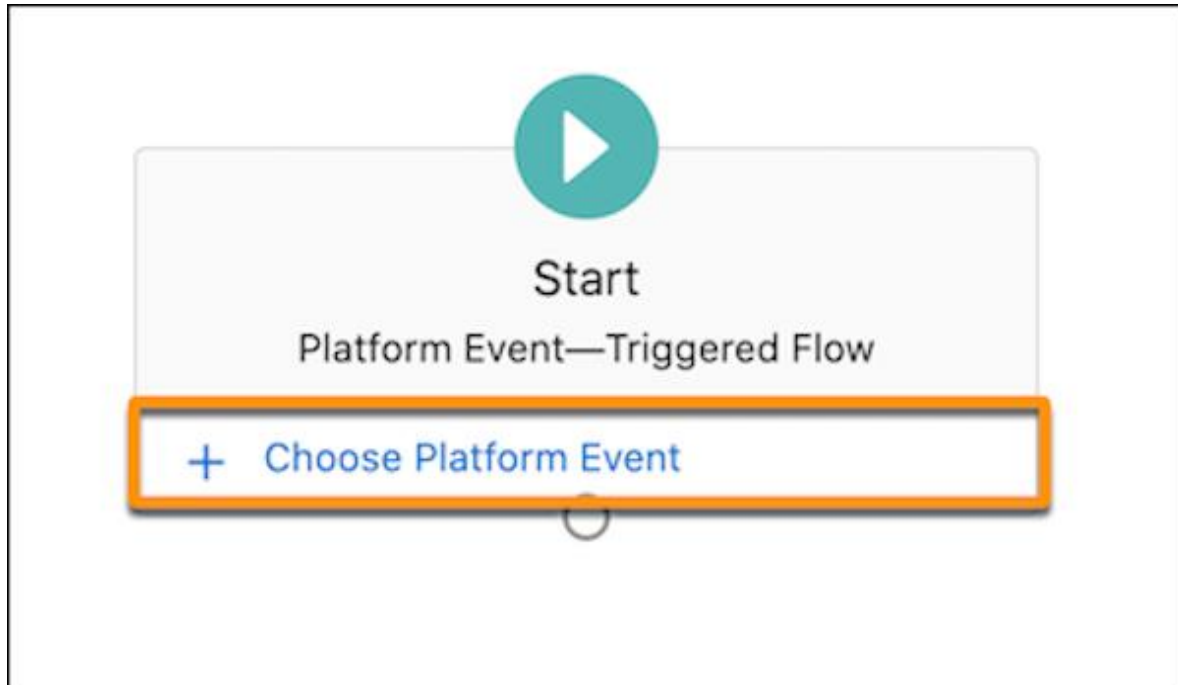

PLATFORM EVENT FLOW

- Platform Event Flow is a Salesforce feature that allows users to define, publish, and subscribe to events within the Salesforce platform.
- Platform Event Flow operates on a publish-subscribe model. Events are defined within Salesforce, and when these events occur (either from within Salesforce or from an external source), they publish a message
- Publishers send the event messages to the event bus. There are subscribers, who are listening for the event messages and, once received, will in turn do something. Flows can be subscribed to platform event messages. When platform event messages published through Apex, APIs, flows, and other processes are received, this will launch the platform event-triggered flow.

PLATFORM EVENT FLOW

PAUSE CONDITIONS **RESUME EVENT**

When this event occurs, the flow resumes and takes the associated path.

* Pause Until...
A Specified Time A Platform Event Message is Received 1

* Platform Event

PLATFORM EVENT FLOW

Before you create your platform event-triggered flow, you'll need to create your platform event. Creating a new platform event is, in a way, very similar to creating a new custom object.
